

AI Prompt Document & Development Log

Project: Airbnb Clone - Desktop Listing Page & Overlays **Assignment:** PlayPower Labs
Frontend Engineering Take-Home **Live Site:** [<https://airbnb-clone-project-seven.vercel.app/>]
(<https://airbnb-clone-project-seven.vercel.app/>) **GitHub Repository:**
[https://github.com/KhushalGhoghari/Airbnb_clone]
(https://github.com/KhushalGhoghari/Airbnb_clone)

Executive Summary

This document logs all **AI prompts, system instructions, engineering directives, visual refinements, and execution sequences** utilized during the development of the PlayPower Airbnb Clone project. It serves as a transparent audit trace of how AI capabilities were directed to engineer a pixel-accurate React application, establish production architecture, extract assets, debug cross-origin image isolation, refine interactive UI components, push to GitHub, and deploy to Vercel.

Table of Contents

1. [Phase 1: Project Review & Code Audit Prompts](#phase-1-project-review--code-audit-prompts) 2. [Phase 2: Production Architecture System Design Prompts](#phase-2-production-architecture-system-design-prompts) 3. [Phase 3: Reference Asset Analysis & Local Integration Prompts](#phase-3-reference-asset-analysis--local-integration-prompts) 4. [Phase 4: Component Refinements & Visual UI Feature Prompts](#phase-4-component-refinements--visual-ui-feature-prompts) 5. [Phase 5: Layout Architecture & Full-Width Transition Prompts](#phase-5-layout-architecture--full-width-transition-prompts) 6. [Phase 6: GitHub Integration & Vercel Live Deployment Prompts](#phase-6-github-integration--vercel-live-deployment-prompts)

Phase 1: Project Review & Code Audit Prompts

Prompt 1.1: Senior Frontend Code Audit

User Prompt

:

"Review the entire PlayPower assignment implementation as a senior frontend engineer. Do not rewrite the project unnecessarily."

Check: component structure, duplicated code, unnecessary dependencies, state management, React rendering behavior, event listener cleanup, keyboard event cleanup, modal/lightbox lifecycle, focus management, image loading, CSS maintainability, accessibility, build errors, console errors, unused files, unused dependencies, hardcoded values.

Create `FINAL_CODE_REVIEW.md` and classify findings as: CRITICAL, HIGH, MEDIUM, LOW. Fix CRITICAL and HIGH issues automatically."

Key Execution Results:

- Audited entire React codebase (`App.jsx` , `PropertyInfo.jsx` , `PhotoTour.jsx` , `Lightbox.jsx`).
- Fixed event listener cleanup on modal unmount.
- Enforced focus trapping and keyboard navigation (`Escape` , `ArrowLeft` , `ArrowRight`).
- Created [`FINAL_CODE_REVIEW.md`]
(file:///c:/Users/Lenovo/Downloads/Airbn%20clone/FINAL_CODE_REVIEW.md).

Phase 2: Production Architecture System Design Prompts

Prompt 2.1: Large-Scale Marketplace System Architecture

User Prompt

:

"Create a high-level production architecture diagram for a large-scale vacation-rental marketplace similar to Airbnb. Show the scaling strategy for: web/mobile clients, CDN, load balancing, frontend delivery, API gateway, authentication, listing service, search service, booking/reservation service, user service, payment service, notification service, relational/transactional data, search index, object/image storage, caching, message queue/event bus, observability, deployment infrastructure, horizontal scaling.

Create ARCHITECTURE_DIAGRAM.md and a clean diagram suitable for submission as PNG or PDF."

Key Execution Results:

- Engineered complete microservice system architecture document
[ARCHITECTURE_DIAGRAM.md]
(file:///c:/Users/Lenovo/Downloads/Airbn%20clone/ARCHITECTURE_DIAGRAM.md).
- Designed synchronous request paths, asynchronous event bus (Kafka), ElasticSearch index, Redis caching tiers, and multi-region AWS deployment model.

Phase 3: Reference Asset Analysis & Local Integration Prompts

Prompt 3.1: Asset Discovery from Reference Site

User Prompt

:

"Open the reference website: `https://airbnb-clone-umber-two.vercel.app/` . Use developer/network inspection capabilities to identify publicly loaded image assets used by property listing. Do NOT copy site source code. Report for every relevant property image: Image number/order, What image shows, Publicly loaded image URL, Dimensions, Usage.

Create `REFERENCE_IMAGE_ASSETS.md` with table. Tell me total number of property images found."

Prompt 3.2: Image Diagnosis & Chrome ORB Isolation Resolution

User Prompt

:

"The diagnosis confirms remote reference images are blocked by Chrome ORB when embedded from localhost. Do NOT use Vite proxy. We will use local image assets.

Task: Retrieve each of 15 image assets from reference website and save into `public/assets/images/` as `img-01.jpeg` ... `img-15.jpeg` , plus host photo and laurels. Update `src/data/propertyImages.js` so every property image uses local path."

Key Execution Results:

- Documented all 15 property photos in [`REFERENCE_IMAGE_ASSETS.md`] (`file:///c:/Users/Lenovo/Downloads/Airbn%20clone/REFERENCE_IMAGE_ASSETS.md`).
- Downloaded 22 local media assets into `public/assets/images/` .
- Updated `src/data/propertyImages.js` and verified zero 404 image load errors.

Phase 4: Component Refinements & Visual UI Feature Prompts

Prompt 4.1: "Where you'll sleep" Photo Cards

User Prompt

:

"where we have to change the 'where you will slepp' area, here i also give you photo, so you have to change like this."

Key Execution Results:

- Updated `SleepingArrangements.jsx` to render 2 photo cards:
 - **Bedroom:** Double bed photo (`img-02.jpeg`), title *"Bedroom"*, subtitle *"1 double bed"*. - **Living room:** Yellow sofa photo (`img-03.jpeg`), title *"Living room"*, subtitle *"1 sofa"*.

Prompt 4.2: "5 nights in Candolim" Interactive Dual Calendar

User Prompt

:

"and after this area we have to add calender area, i also give you photo of that."

Key Execution Results:

- Created `CalendarSection.jsx` rendering October 2026 and November 2026 side-by-side calendars.
- Implemented `18 Oct - 23 Oct` selected date range highlight styling, disabled dates in November, keyboard icon button, and *"Clear dates"* button.

Prompt 4.3: "Where you'll be" Custom Map Graphic & Neighbourhood Highlights

User Prompt

:

"you remove map from app, add this, i give you photo here."

Key Execution Results:

- Updated `LocationMap.jsx` with custom Airbnb map visual graphic:
 - Sea/land color split, translucent green area highlight circles, central black home badge icon (🏠), search glass button (🔍), and zoom controls (+ / -).
 - Added *"Exact location will be provided after booking."* and *"Neighbourhood highlights"* text.

Prompt 4.4: "Things to know" 3-Column Grid

User Prompt

:

"second you have to add 'things to know' and 'more stay nearby' area in the app, i also give you photo of that"

Key Execution Results:

- Created `ThingsToKnow.jsx` with 3 columns:
 - **Cancellation policy:** Calendar icon, refund details, *"Learn more"*.
 - **House rules:** Key icon, check-in/checkout times, 3 guests max, *"Learn more"*.
 - **Safety & property:** Shield icon, carbon monoxide/smoke alarm notes, security cameras, *"Learn more"*.

Prompt 4.5: "More stays nearby" 5-Card Carousel

User Prompt

:

"and 'more stay nearby' area in the app"

Key Execution Results:

- Created `MoreStaysNearby.jsx` rendering 5 listing cards with image thumbnails, titles, prices, ratings, `1/2` pagination, and navigation arrows.

Phase 5: Layout Architecture & Full-Width Transition Prompts

Prompt 5.1: Unpinning Sticky Sidebar & Full-Width Bottom Zone

User Prompt

:

"this section will be scroll when the calender area are finish, in the prives photo you can see that map, nearby area, etc are in the full page means there is no price section in right side of it."

Key Execution Results:

- Restructured `App.jsx` and `PropertyInfo.jsx` into two layout zones:
1. **Top 2-Column Grid Zone:** Left details + Sticky Reservation Card (ends after `CalendarSection`).
 2. **Full-Width Bottom Zone:** Spans 100% full container width (`1120px`) for Amenities, Reviews, Location Map, Host Profile, Things to know, and More stays nearby.

Phase 6: GitHub Integration & Vercel Live Deployment Prompts

Prompt 6.1: Git Repository Push

User Prompt

:

*"add this project in the github, i already crate new privet repo, here it is:
https://github.com/KhushalGhoghari/Airbnb_clone"*

Key Execution Results:

- Initialized git repository, created `.gitignore` , committed all source files, and pushed to `main` branch.

Prompt 6.2: Live Vercel Production Deployment

User Prompt

:

"live this project in the vercel, and project name is: airbnb-clone-project"

Key Execution Results:

- Created `vercel.json` configuration and deployed live via Vercel CLI.
- Live URL: <https://airbnb-clone-project-seven.vercel.app/>.

Prompt 6.3: Documentation Generation

User Prompt

:

"now make te README file and add url in the file, and aslo add this file in the github repo."

"add AI prompt documetn in pdf"

Key Execution Results:

- Generated comprehensive `README.md` and created `AI_PROMPT_DOCUMENT.pdf` .

Document Metadata

- **Author:** Antigravity AI Pair Engineer
- **Target Repository:** `KhushalGhoghari/Airbnb_clone`
- **Deployment Endpoint:** `https://airbnb-clone-project-seven.vercel.app/`
- **Build Status:** Passed (Vite production build: 574ms)
